Changed
component: 310426 → 310543
status: New → Intended Behavior

sp...@google.com added comment #3:

Hi! We've reviewed your submission regarding data deletion in Google AI Studio and Google Drive. Although it may seem surprising, the behavior you're describing, where you can recover your own supposedly deleted chat data via Google Drive File Recovery, is actually working as intended from a security VRP perspective.

Our VRP rules on 'Intended Functionality' and 'Non-sensitive information disclosure' clarify that demonstrating the ability for a user to access or recover their *own* data, especially when they previously had access to it, is generally not considered a security vulnerability. This applies even if the data persists on our backend systems in a way that allows for recovery by the legitimate owner. For more context, you can refer to our VRP rules on the Google and Alphabet Vulnerability Reward Program and AI Vulnerability Reward Program, specifically the sections on 'Intended Functionality' and 'Prior Access' in the Non-sensitive information disclosure article.

If you think we've misunderstood your report, and you can show a well-defined security risk where an *unauthorized* third party gains access to data they shouldn't, please let us know what we missed.

Thanks again for your report and time,
The Google Bug Hunter Team
